

Scaling Heights: Affordability Implications of Zoning Deregulation in India

Geetika Nagpal (Brown) & Sahil Gandhi (Manchester)

January 7, 2024

Motivation

- ▶ Housing supply has failed to keep pace with rapid urban population growth.
 - ▶ India is projected to add 416 million urban residents by 2050.
 - ▶ 17% of urban India lives in slums (2011).
- ▶ Stringent zoning regulations exist in most growing economies.
 - ▶ Restrict scale of development
 - ▶ Limit supply, affordability
- ▶ Can deregulation increase affordable housing supply?
 - ▶ What are the characteristics of housing developed?
 - ▶ Who benefits from the new housing?

Impact of Deregulation is Ambiguous

Traditional View:

- ▶ ↑ Housing Supply
- ▶ Prices ↓
- ▶ Resident Income ↓

Impact of Deregulation is Ambiguous

Traditional View:

- ▶ ↑ Housing Supply
- ▶ Prices ↓
- ▶ Resident Income ↓

Alternative View:

- ▶ New housing is luxury
- ▶ Apartment size ↑
- ▶ Small supply effect
- ▶ Resident Income ↑

The New York Times

Taller Towers, Fewer Homes

New boutique condo towers, some with fewer apartments than the buildings they replace, are squandering high-density sites in Manhattan, urban planners say.

Mumbai: One of India's fastest growing cities

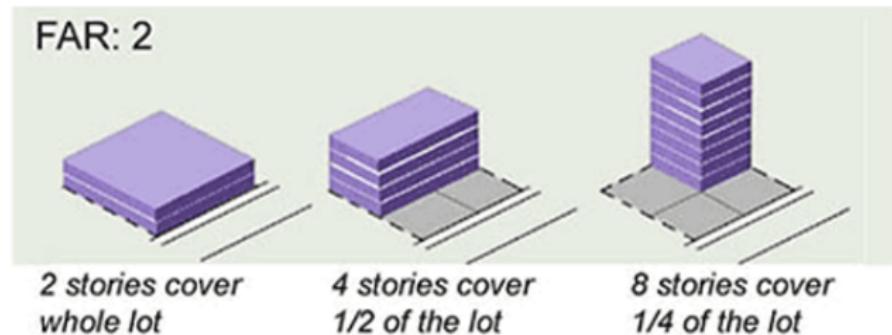

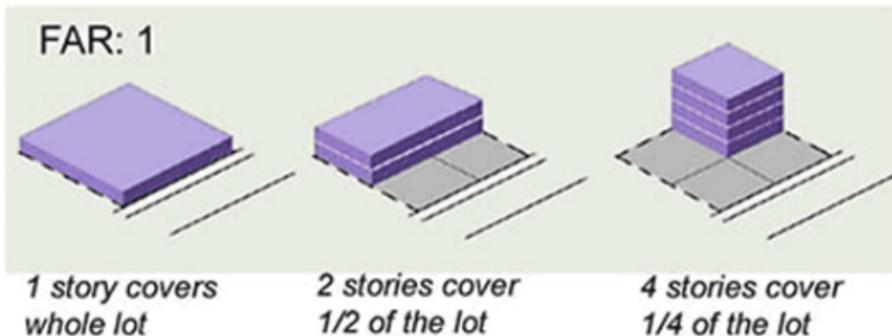

- Grew from 6 million in 1971 to over 12 million in 2011.

Source: Our World in Data

FAR governs housing supply in Mumbai

- FAR (floor to area ratio) = $\frac{\text{Total Floorspace (all floors)}}{\text{Area of Plot}}$

“Stringent” FAR limits in Mumbai

- ▶ In 1991, FAR cap was formally adopted in a Development Plan (DP).
- ▶ Prior to 2018, FAR was capped at 2.7 for residential development.

Location	FAR cap
Mumbai	2.7
Midtown Manhattan	12
Chicago	12
Singapore	8
Hong Kong	10

FAR relaxed at the road-width level

- ▶ New Development Plan changed FAR caps by road-width.
- ▶ The Plan was made public in May 2016, and implemented in Sep 2018.

Road Width (in m)	Pre-2018 FAR Cap	Post-2018 FAR Cap	
		City	Suburb
<9	2.7	1.8	1.35
≥ 9 and <12	2.7	2.7	2.7
≥ 12 and <18	2.7	3.24	2.97
≥ 18 and <27	2.7	3.65	3.24
≥ 27	2.7	4.05	3.38

▶ Opposition

FAR relaxed at the road-width level

- ▶ New Development Plan changed FAR caps by road-width.
- ▶ The Plan was made public in May 2016, and implemented in Sep 2018.

Setting and Policy Reform

Data

Empirical Strategy and Reduced Form Analysis

Model and Counterfactuals

Conclusion

Model

- ▶ Reduced form captures relative changes, but not spillover effects:
 - ▶ Treatment and control are in same neighborhood
 - ▶ Neighborhoods with large supply increase compete with other areas
- ▶ What is a change in apartment prices capturing?
 - ▶ Apartment is a bundle of building amenities and apartment size
 - ▶ FAR relaxation changes both these characteristics

Model

- ▶ Reduced form captures relative changes, but not spillover effects:
 - ▶ Treatment and control are in same neighborhood
 - ▶ Neighborhoods with large supply increase compete with other areas
- ▶ What is a change in apartment prices capturing?
 - ▶ Apartment is a bundle of building amenities and apartment size
 - ▶ FAR relaxation changes both these characteristics
- ▶ How does the model address these?
 - ▶ Allow for spillovers between treatment and control
 - ▶ Allow for movement of households across neighborhoods
 - ▶ Hedonic pricing of apartments

Model Overview

Potential Buyers

Income group $g \in \{H, L\}$; \bar{M}_g

Get T1EV preference shock

Move to location κ ; \bar{u}_g

Housing Chars. (given p)

Get T1EV preference shock

Move to location κ ; \bar{u}_g

Housing Chars. (given p)

Perfectly Competitive Developers

Fix num. + location of devpts.

Assigned parcel of area L , FAR = f

Develop for group g

Housing Chars. (given p, f)

Model Overview

Potential Buyers

Income group $g \in \{H, L\}$; \bar{M}_g

Get T1EV preference shock

Move to location κ ; \bar{u}_g

Housing Chars. (given p)

Equilibrium for each κ

Demand = Supply \implies Land rents (r), Prices (p), Housing for g

Profit, Utility Maxm \implies Housing Chars.

Perfectly Competitive Developers
Fix num. + location of devpts.

Assigned parcel of area L , FAR = f

Develop for group g

Housing Chars. (given p, f)

► Demand

► Supply

Add amenity space to standard models

- **Buyer** pays p for apartment of size h , with amenity space A :

$$U(p, h, A; Y) = \alpha \ln(Y - p) + \beta \ln h + (1 - \alpha - \beta) \ln A$$

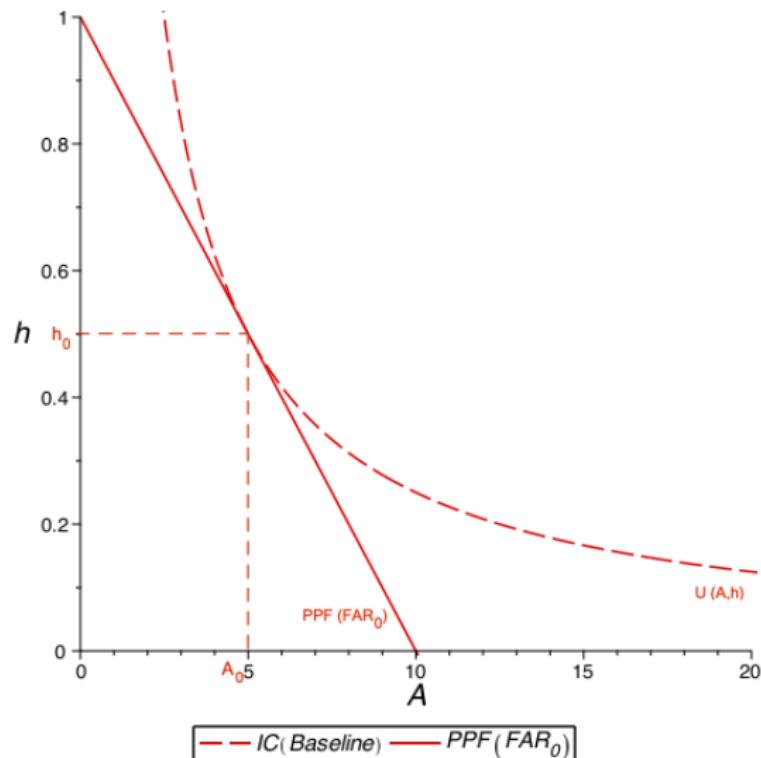

- **Developer** provide residential and public amenity floorspace.
 - p : price of unit, N : units
 - c : construction cost, f : FAR limit
 - r : rental rate, L : parcel area
 - A : public amenity space

$$\pi = pN - cfL - rL$$

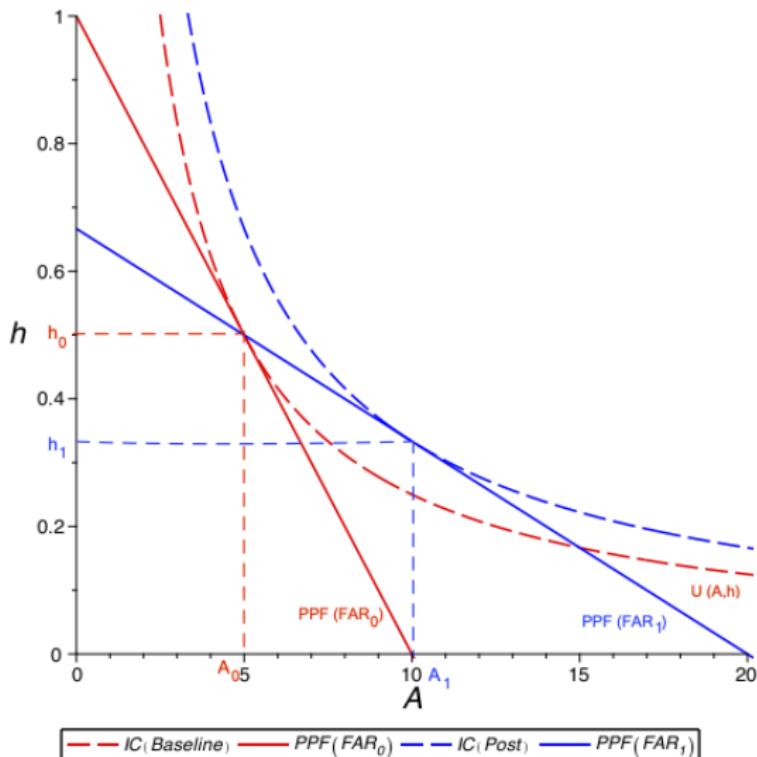

$$s.t. fL = Nh + A$$

► FOC

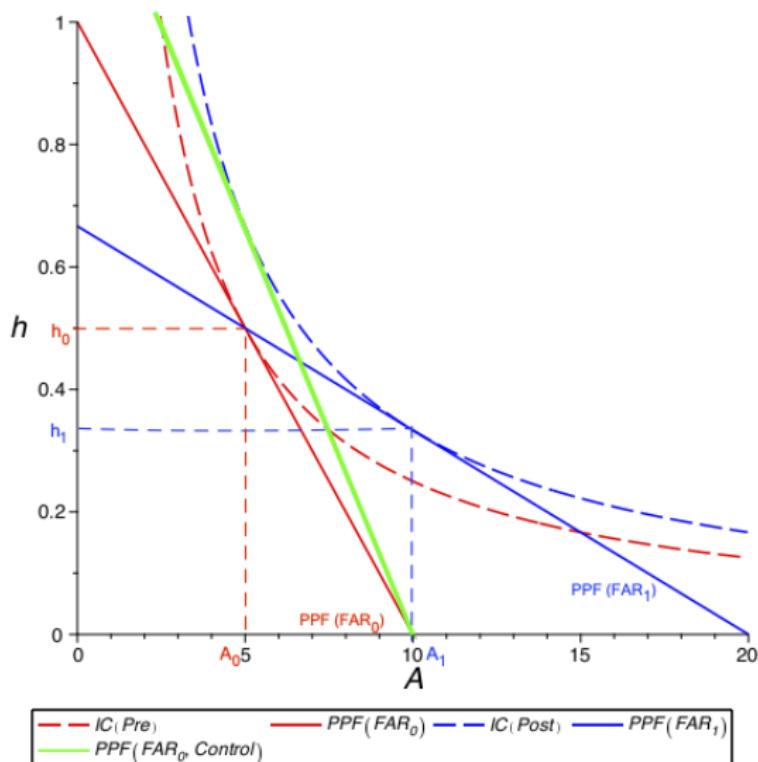

Equilibrium for high (or low) income HHs

Change in FAR for treated developments

Spillover effect for control developments

Estimation

- ▶ Two types of neighborhoods: high (low) share of treated plots
 - ▶ High = zipcode has over 33% plots treated (75th percentile)
 - ▶ Systematic relation between share of treated plots and land prices
- ▶ Data moments capture changes in housing char and prices across locations after relaxation
- ▶ Estimate parameters via indirect inference to match data moments
- ▶ $U_{g\kappa} = \alpha_g \ln(Y_g - p_{g\kappa}) + \beta_g \ln h_{g\kappa} + (1 - \alpha_g - \beta_g) \ln A_{g\kappa}$

► Demand

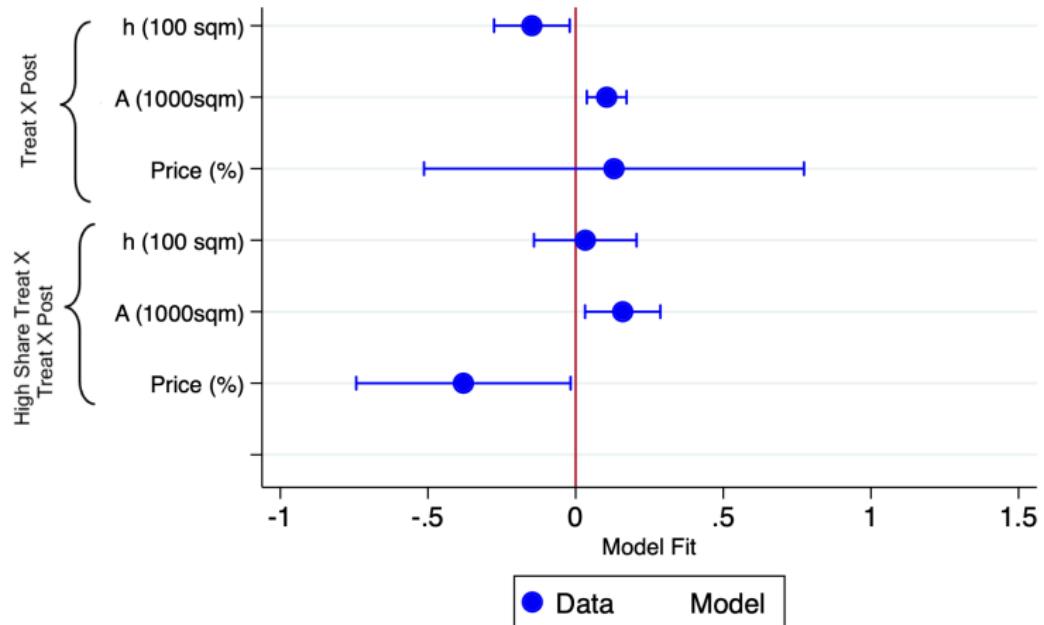

► Supply

Data Moments

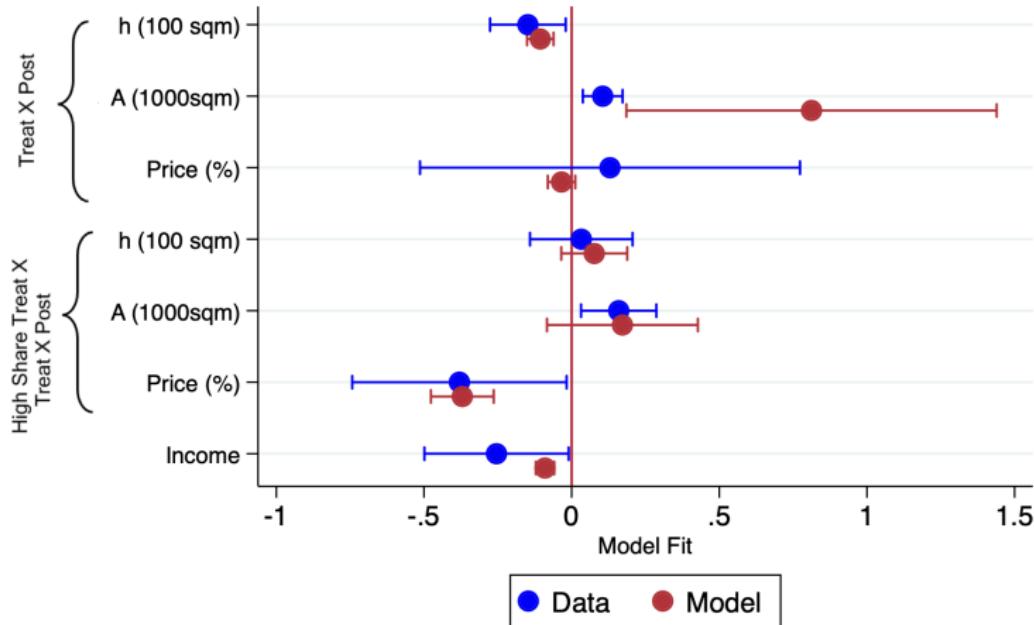

$$\begin{aligned} Y_{itz} = & \alpha + \beta_1 HighShare_z \times Treat_i \times Post_t + \beta_2 Treat_i \times Post_t \\ & + \beta_3 HighShare_z \times Treat_i + \beta_4 HighShare_z \times Post_t + \beta_5 HighShare_z \\ & + \beta_6 Treat_i + \beta_7 Post_t + X_z + \varepsilon_{itz} \end{aligned}$$

- ▶ Y_{itz} : Outcomes of interest (Housing Char, Prices)
- ▶ $HighShare_z$ = over 33% plots treated
- ▶ $Treat_i = 1$ if Road Width ≥ 12 m
- ▶ $Post_t = 1$ if $t \geq 2018$
- ▶ X_z : Zipcode (z) controls

Data Moments

Model Fit

Deregulation increased housing affordability

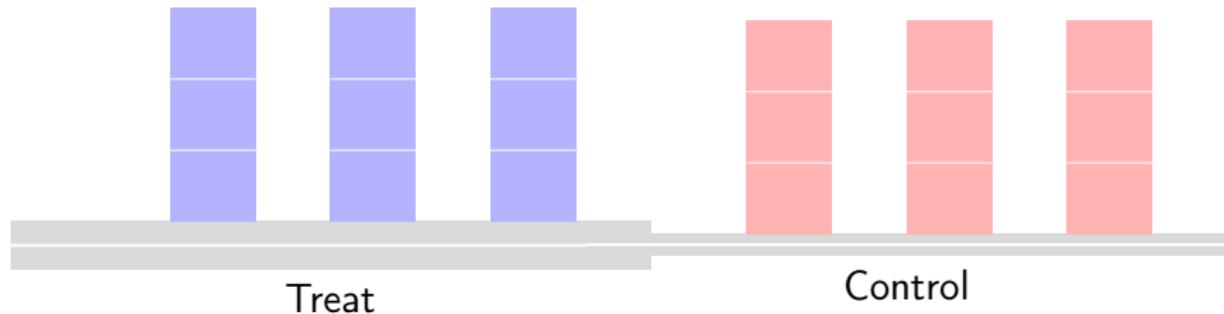

- ▶ Lower-income households have higher WTP for shared amenity space.
- ▶ Post-relaxation average income of buyers was 3.18% lower
 - ▶ As amenities ↑ housing size ↓: ↑ lower-income HH
- ▶ $U_{g\kappa}(i) = \alpha_g \ln(Y_g - p_{g\kappa}) + \beta_g \ln h_{g\kappa} + (1 - \alpha_g - \beta_g) \ln A_{g\kappa} + \varepsilon_\kappa(i)$

Parameter	Estimates	
	High Income	Low Income
α	0.784	0.745
β	0.143	0.05
$1 - \alpha - \beta$	0.073	0.205

How can governments design deregulation policies?

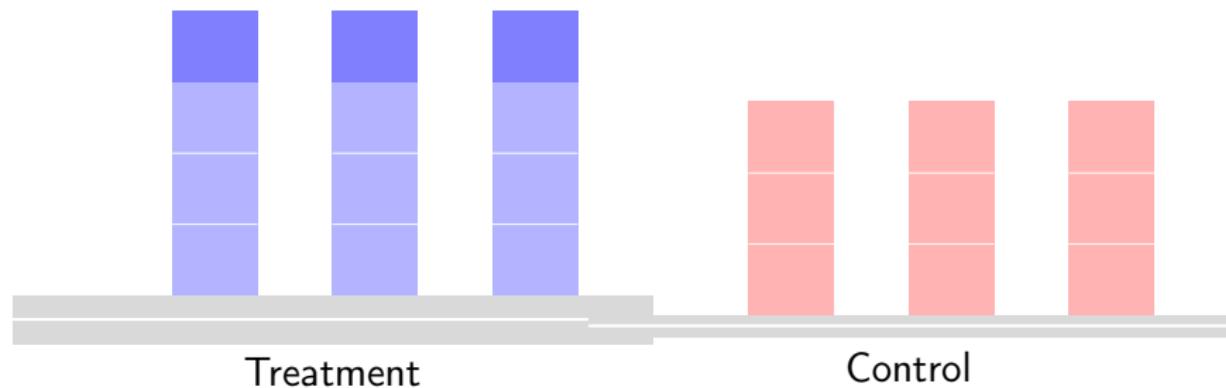

- ▶ Consider two policy options:
 - ▶ Rule-based/targeted relaxation
 - ▶ Mumbai: along wide roads
 - ▶ Other cities: transit-oriented development
 - ▶ Uniform relaxation across all locations in the city (e.g. Delhi).
- ▶ Which policy design makes new housing more affordable?
- ▶ Different policies lead to:
 - ▶ different characteristics of housing developed
 - ▶ draw in different income households

Initial State of the World

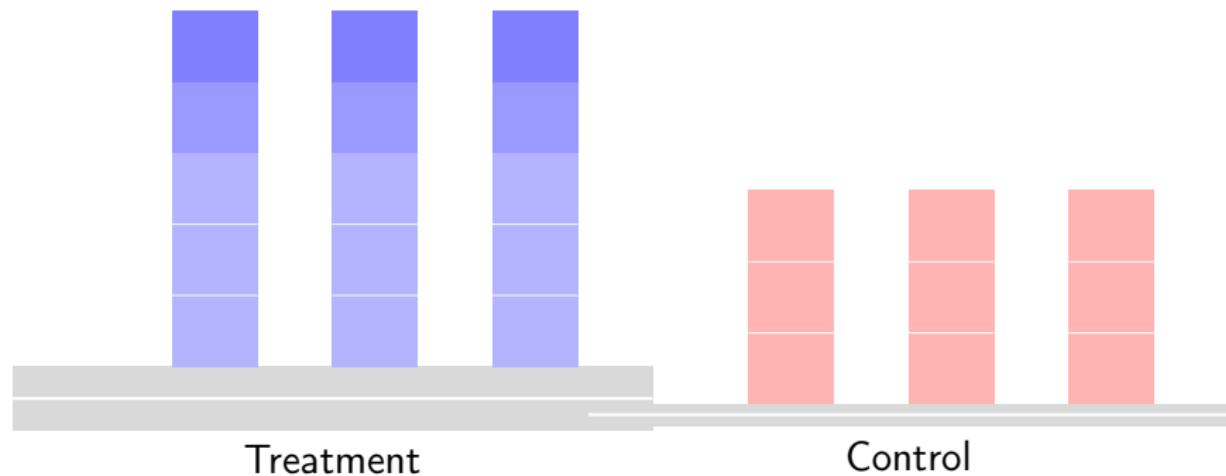

▶ Table

FAR relaxed in 2018

▶ Table

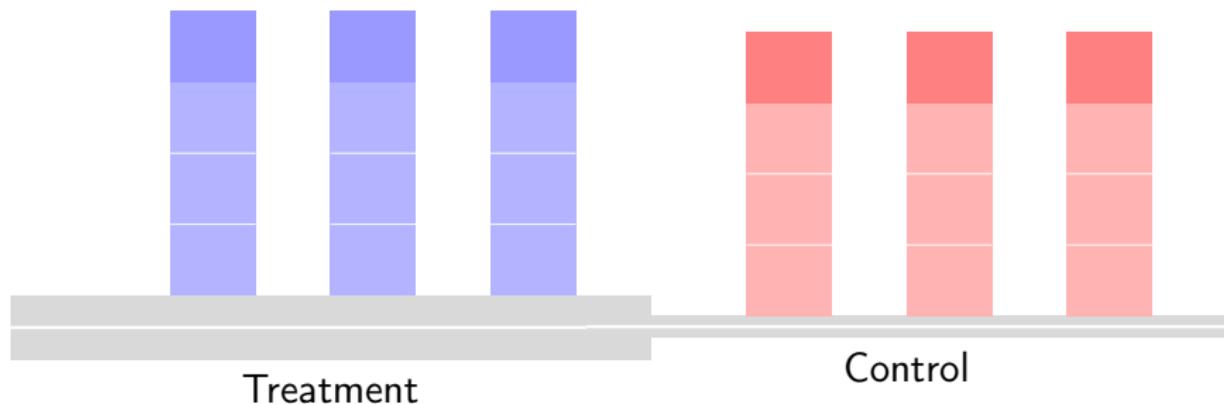

CF 1: Extra 5% relaxation to treated devpts

- ▶ Amplify scale effects. Compared to 2018 reform, in treated devpts:
 - ▶ Land rents ↑ by 1.8%
 - ▶ $h \downarrow$ more; supply increases by 1.2%.
 - ▶ Prices fall by 2.5%.
- ▶ Draws in more lower-income HHs; avg buyer income 1.7% lower.

▶ Table

CF 2: 10% relaxation to control developments

- ▶ Mute scale effects. Compared to 2018 reform, in treated devpts:
 - ▶ Land rents ↓ by 1.4%
 - ▶ Smaller supply increase of 0.1%.
 - ▶ Prices increase by 0.5%
- ▶ Draws in more higher income HH, avg buyer income 1.2% higher

▶ Table

ANALYSIS URBAN

Mumbai's New Development Plan Is About More Real Estate for Developers

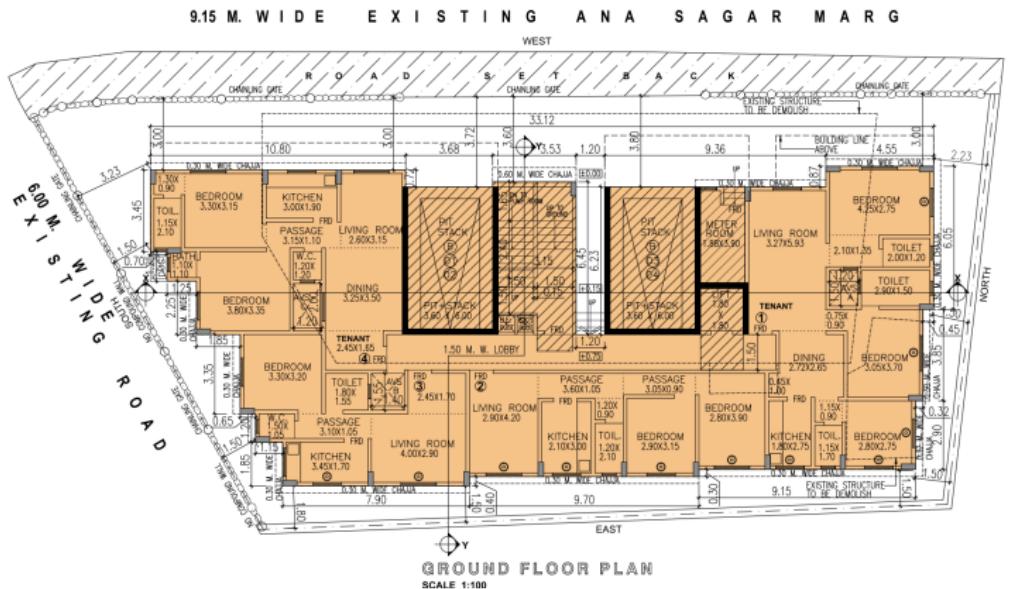

The planning system is oriented increasingly towards servicing elite developments, as opposed to redistributing benefits through the provision of subsidised housing, transport, healthcare and education.

Over the decades, Mumbai's planning system has become a tool to alienate more and more high-value land to private developers, transfer costs of development on new home buyers, enable the government and property developers to extract rents and to create an infrastructure that benefits the very few while neglecting the needs of the very many.

Illegal Structures are Regularly Demolished

Apex court tells BMC to raze illegal floors in 6 Worli highrises

The fate of more than 500 residents of six highrises in Worli hangs in the balance as the civic administration will soon demolish the additional illegal floors.

Written by [Express News Service](#) |
April 26, 2013 02:53 am

The fate of more than 500 residents of six highrises in Worli hangs in the balance as the civic administration will soon demolish the additional illegal floors.

Brihanmumbai Municipal Corporation (BMC) had sent notices to these buildings over 17 years ago.

Following a Supreme Court verdict, BMC will finally demolish the illegal floors in a few weeks, officials said.

This is one of the landmark cases and we plan to take stringent steps to drive home the point that no such illegal buildings will be tolerated in the city. said

Mumbai: BMC gears up to crack down on illegal constructions

Discrete Choice Framework: Demand

- ▶ **Static spatial model** with:
 - ▶ **Potential Buyers:**
 - ▶ Two income groups $g \in \{H, L\}$ with different preferences
 - ▶ Choose one of four locations κ to move to:
 - ▶ $(T, C) \times (\text{High Share}, \text{Low Share})$
 - ▶ **Demand:**

$$U_{g\kappa}(i) = \alpha_g \ln(Y_g - p_{g\kappa}) + \beta_g \ln h_{g\kappa} + (1 - \alpha_g - \beta_g) \ln A_{g\kappa} + \theta \epsilon_\kappa(i)$$

where $\epsilon_\kappa(i) \sim T1EV(\theta)$

$$\lambda_{g\kappa} = \bar{M}_g \times \frac{\exp(U_{g\kappa}/\theta)}{\exp(\bar{u}_g) + \sum_{\kappa'} \exp(U_{g\kappa'}/\theta)}$$

▶ Back

Developers choose which income group to serve

- ▶ **Static spatial model** with:
 - ▶ **Households:**
 - ▶ Two income groups $g \in \{H, L\}$ with different preferences
 - ▶ Choose: location κ to move to
 - ▶ **Developers:**
 - ▶ Maximize profits s.t. floorspace constraint
 - ▶ Perfectly competitive.
 - ▶ Choose: which income group g to develop for
- ▶ **Supply:**

$$\pi_{g\kappa} = p_{g\kappa} N_g - c_g f_\kappa L - r_\kappa L$$

$$\text{s.t. } f_\kappa L = N_{g\kappa} * h_{g\kappa} + A_{g\kappa}$$

$$\pi_{g\kappa} = 0$$

▶ Back

Characterizing Equilibrium

- ▶ **Static spatial model** with:
 - ▶ **Households:**
 - ▶ Two income groups $g \in \{H, L\}$ with different preferences
 - ▶ Choose: location κ to move to
 - ▶ **Developers:**
 - ▶ Maximize profits s.t. floorspace constraint
 - ▶ Perfectly competitive.
 - ▶ Choose: which income group g to develop for
- ▶ **Equilibrium:** Fixed point in $r_{\kappa q}$ which:
 - ▶ Units Demanded = Units Supplied
 - ▶ Utility, Profit maxm
 - ▶ $(A_g, h_g)^D = (A_g, h_g)^S$
